## Projects

<b>Crossbar Scheduling</b>	2016.2 - Present
<ul style="list-style-type: none"><li>Designed a simple yet effective “add-on” crossbar scheduling algorithm for input-queued switches, which can boost the performance (switch throughput or delay or both) of existing switching scheduling algorithms (<i>e.g.</i>, iSLIP and SERENA) with almost “no” computational overhead. (SIGMETRICS 2017)</li><li>Built an efficient and flexible simulator for crossbar scheduling in input-queued switches.</li></ul>	
<b>Time Capsule for Online Social Activities</b>	2015.9 - Present
<ul style="list-style-type: none"><li>Designed a hybrid streaming-sampling algorithm for high accurate measurements of Online Social Networking (OSN) cascade statistics, using limited memory, which decreased the errors (measured in <math>\ell_2</math>) by more than one order of magnitude. (ICCCN 2017)</li></ul>
